## International Policy Options for Reducing the ...

International trade increases human welfare but also leads to the introduction and establishment of nonnative invasive species, such as human and livestock diseases, pests and diseases of crops, and species that cause environmental harm. The increasingly global nature of trade means that efforts to prevent the spread of invasive species should be internationally coordinated.

Abstract. However, many such impacts, including extinctions of both island and continental species, have both been demonstrated and judged by the public to be harmful. Although more public attention has been focused on non-native animals than non-native plants, the latter more often cause ecosystem-wide impacts.
